SUMMARY:

QA Automation Engineer with 4+ years of building test automation from scratch – twice as the sole automation engineer on the team. Web, Android and performance testing wired into CI/CD. Former anesthesiologist (10 years) – brings clinical-grade rigor to QA.

TECHNICAL SKILLS:

- **Automation:** Python, pytest, Playwright, Appium (Android), Page Object / Screen Object
- **Performance:** JMeter, Prometheus, Grafana
- **API & data:** REST API testing (requests, Postman), PostgreSQL, MS SQL, SQLAlchemy
- **CI/CD & infra:** GitHub Actions, Azure DevOps, Docker, AWS, Linux, Git
- **Process & AI:** test design, Qase, Jira, Agile / Scrum, Claude Code skills
- **Familiar with:** k6, Selenium, JavaScript · **Languages:** Ukrainian (native), English (B2)

WORK EXPERIENCE:

QA AUTOMATION ENGINEER – LNOKS

Dec 2025 – present

- Client project: EZBuild – multi-tenant construction-management SaaS for US general contractors (web + Android). Sole automation engineer in a 6-person team.
- Built the E2E UI framework nearly from scratch (Python, pytest, Playwright, POM): 1,581 tests and 257 page objects; 70% of the ~2,000-case test base automated.
- GitHub Actions CI: diff-based test selection, parallel shards on isolated tenants, merged reporting; a 137-test smoke suite gates every stage deploy.
- Android automation: ~100 Appium tests on emulators and real devices.
- JMeter load tests (9 scenarios, up to 1,000 users, Prometheus + Grafana, weekly on AWS) exposed bottlenecks that led to autoscaling and DB optimizations.
- Built Claude Code skills for Qase test cases and Jira bug reports: authoring went from ~10 cases a day to ~100 an hour; adopted company-wide.
- Verified data in PostgreSQL (SQLAlchemy); worked directly with the US client in English – demos, grooming, weekly syncs.

QUALITY CONTROL ENGINEER (QA AUTOMATION) – INFOPULSE

Dec 2021 – Sep 2025 · Kyiv

- Internal time-tracking system used company-wide (~2,000 employees). Sole automation engineer in a 7-person team.
- Moved from manual QA to automation within six months; built the framework from scratch (Python, pytest, Playwright, Page Object).
- ~500 UI and API tests covering 80%+ of critical functionality – regression cut from 3 days to ~5 hours.
- MS SQL validation after UI actions; DB-level test preconditions and cleanup.
- Azure DevOps pipelines run the suite on every commit.

ANESTHESIOLOGIST – KYIV CLINICAL HOSPITALS

2010 – 2022

Alexander Clinical Hospital, International Neurosurgery Center

Ten years of protocol-driven, high-stakes work under pressure – the foundation of how I approach risk and verification.

PERSONAL PROJECTS:

- **Mirrolit** – Android e-book reader that shows the original and a live translation side by side (Kotlin, Jetpack Compose, ML Kit, on-device translation). Built with Claude Code, covered by unit and instrumented tests; in closed testing on Google Play. · github.com/p-nk-ss/SplitReader
- **LabLib** – Android app that interprets lab results (Kotlin), built with Claude Code from product planning to deployment.
- **News pipeline → Telegram** – v1: Python bot (Playwright scraping, RabbitMQ, OpenAI API); v2: self-hosted n8n on Hetzner with PostgreSQL, hash-based de-duplication and auto-publishing. · t.me/self_games_news
- **protocols.pankaz.dev** – translated anesthesiology clinical guidelines as a structured reference site (Next.js).

EDUCATION

- **Medicine** – Bogomolets National Medical University, Kyiv · 2004–2010
- **Residency** – Shupyk National Medical Academy of Postgraduate Education · 2010–2012
- **Certificate:** Fundamentals of Software Testing – QATestLab
